

THE GENIUS SQUARE

Genius squares is a game where you have to be fast, smart and be as quick to beat your opponent. A bonus to the game is that you can also play by yourself and it is very competitive game that will encourage you and your friends to think quickly.

It is a little bit different to most games because you roll 2 dice and on each one it will give you a letter and a number so you can position them on the board. Next, you have to fit in 9 shapes of different sizes and colours and whoever is the first to put all their shapes in wins.

A fact about Genius squares is that there is 62,208 possibilities on how to fit them in ~~around~~ around the blockers which are the pieces in the grid that you can't put the shapes in. There may be times when it seems impossible but there will always be at least one solution.

I think it is for all ages because my nan had played with me and she thought that it was so good she ~~bought~~ bought it for herself. There are many other games like this including The Genius Star, The Genius Gems and Bee Genius.
